

StageBug SB-2

Passive Direct Box

Thank you for purchasing the StageBug SB-2, a compact passive direct box that is perfect for active basses and keyboards. The SB-2 does not require any power to operate: simply connect to the input using a standard 1/4" instrument cable, and take the balanced XLR output to a microphone input on the PA mixing console. A Thru output can be used to feed a tuner or a stage amplifier, or it can be used as a second input to sum stereo keyboards down to mono to save mixer channels.

Quick Start

For additional information including frequently asked questions, please visit our website at www.radialeng.com

1. Using the SB-2 with electric bass.

2. Using the SB-2 with a keyboard.
